

GRC Lifter [600kg]

The GRC 600 designed to lift materials with different levels of porosity, ideal for glass reinforced concrete. This ground-breaking innovation is the first of its kind and is being championed by GGR Group as a dynamic solution to lift concrete elements of varying specifications.

This highly versatile lifter can be operated as a constant runner for more porous materials or on a stop start basis when lifting flat, smooth elements which more easily form a vacuum seal. The GRC 600 benefits from an adjustable lift bail; 360° continuous manual rotation that lockable every 90°, and a 90° tilt function, which allows load to be lifted horizontally or vertically.

With a two-action 'push and slide' suction release system, the GRC 600 features double sealed pads which are part of two truly independent vacuum systems that each have their own battery and vacuum pump for additional peace of mind. Rolling hour meter gauges register the number of hours used. This 600kg capacity lifting device is offered for hire with GGR's Secondary Safety Device (SSD) for Stone as standard.

Key Features

- 600kg capacity - flat or horizontal
- Rolling hour meter gauges
- Adjustable lift bail
- Constant runner or stop start
- Two-action suction release system
- 90° tilt
- Weight: 185kg
- Two independent vacuum systems

Reference Code

VSL26
