

Technical Specification Sheet

Glass Porter 150 [AGT155A]

The Glass Porter 150 is a lightweight motorized stair climbing trolley that can easily shift glass panels, picture frames and doors up and down stairs.

The Glass Porter can glide down steps smoothly, safely and by itself thanks to the innovative battery-powered climbing mechanism which can cover up to 48 steps per minute. With two speed options for safely ascending and descending staircases, the Glass Porter helps minimise the risk of back strain and injury from manual handling.

The trolley's frame width can be adjusted from 700-1250mm and locked at 25mm increments to suit different shaped loads. The frame arms can be swiveled 45 degrees left or right to fit large pieces on narrow stairs.

To preserve battery life, the trolley has an auto-shut off function which kicks in after 10 minutes of idle time. Includes digital battery level gauge, 240V battery recharger and removable battery for convenient charging.

Features

- Capacity: 150kg
- Width: 700-1250mm, lockable at 25mm increments
- Depth: 800mm (150mm shelf depth)
- Height: 1500mm
- 260mm x 85mm pneumatic tyres
- Weight: 34kg
- 240v battery recharge
